Negative feedback amplifier Wikipedia

Although as mentioned in the section Signal flow analysis some form of signal flow analysis is the most general way to treat the negative feedback amplifier representation as two two ports is the approach most often presented in textbooks and is presented here It retains a two block circuit partition of the amplifier but allows the blocks to be bilateral

Semiconductor Wikipedia

Semiconductors are defined by their unique electric conductive behavior somewhere between that of a conductor and an insulator The differences between these materials can be understood in terms of the quantum states for electrons each of which may contain zero or one electron by the Pauli exclusion principle These states are associated with the electronic band structure of the material
