A new solution procedure for the nonlinear telegraph equation

1 Introduction Our goal here is of a purely theoretical question however which may be fundamental especially in the area of computational partial differential equations Can the hyperbolic linear solution structure of Klein-Gordon equation be directly used to construct the nonlinear solution for telegraph equation For that we start by reviewing the telegraph equation

Effective gauge field theory of spintronics ScienceDirect

The six components of vectors \mathbf{E} and \mathbf{B} are therefore described by the four components of $\hat{\mathbf{F}}$ and \mathbf{A} The equations for \mathbf{E} and \mathbf{B} are similar but not completely symmetric because they represent different features of \mathbf{A} and $\hat{\mathbf{F}}$ The fields $\hat{\mathbf{F}}$ scalar potential and \mathbf{A} vector potential are called electromagnetic gauge field In terms of the gauge field the four equations reduces to even simpler two
